**PUBLIC WORKSHOP**

**Draft Remedial Investigation/Feasibility Study for the Environmental Restoration of the Pit 7 Complex at Site 300, Lawrence Livermore National Laboratory.**

You are invited to a public information workshop beginning at 6:30 p.m. on the evening of Thursday, March 18th, 2004 in the Tracy Community Center. The Center is located at 300 East 10th Street in Tracy, California.

Representatives of the U.S. Department of Energy and Lawrence Livermore National Laboratory will present the Draft Remedial Investigation/Feasibility Study for the Pit 7 Complex at the Laboratory's Site 300. They will also respond to questions about the draft report and give a brief overview of environmental restoration progress at Site 300 to-date.

Lawrence Livermore National Laboratory Site 300 is located about 8 miles to the southwest of Tracy in the Altamont Hills. The site is an experimental test facility that is owned by DOE and operated by the University of California.

The Remedial Investigation/Feasibility Study summarizes contaminant characterization efforts and remedial alternatives proposed for addressing contamination at the Pit 7 Complex, located in the northwest portion of Site 300. The Remedial Investigation/

Feasibility Study is required before a decision is made on a specific cleanup action and provides the basis for selection of the action. The decision is made with the appropriate regulatory agencies.

All interested members of the public are encouraged to attend the workshop. For more information regarding this workshop, please contact Bert Heffner, LLNL Environmental Community Relations Manager, at (925) 424-4026, [heffner1@llnl.gov](mailto:heffner1@llnl.gov).
